

# 2014 Mid-South Soybean Board

## Member Projects by Category Detail

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** Biotech | Biotechnology Studies to Improve Soybean Production

**Project:** Development and deployment of biotechnology for soybean improvement **Amount:** \$194,225  
**Investigator:** Nguyen, Henry      **Organization:** University of Missouri      **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** This project takes a holistic biotech approach to identify enabling technology traits, transformation tools and ultimately varieties that contain value-added biotech traits.

Production / Breeding / Biotech Subtotal of (1) Project: **\$194,225**

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** Composition | Studies Improving Soybean Seed Composition of Oil and Pr

**Project:** Genetic modification of sterol composition in soybean seeds **Amount:** \$0  
**Investigator:** Nguyen, Henry      **Organization:** University of Missouri      **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** The overall goal is to develop elite soybean lines with improved nutritional quality and elevated phytosterol content by isolating and manipulating key components of phytosterol biosynthetic pathway in soybean.

**Project:** High throughput cloning and functional characterization of molecular switches for stress tolerance and enhanced seed composition in soybean **Amount:** \$0  
**Investigator:** Nguyen, Henry      **Organization:** University of Missouri      **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** This project takes a holistic biotech approach to identify enabling technology traits, transformation tools and ultimately varieties that contain value-added biotech traits.

**Project:** Characterize the functionality of soybean seed coats and evaluate novel prebiotic fibers from soy in humans **Amount:** \$36,000  
**Investigator:** Lee, Sun      **Organization:** University of Arkansas System's Division of Agriculture      **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** Understand the physical properties of soybean seed coats and provide new uses/applications as functional food ingredients to improve human health

Production / Breeding / Composition Subtotal of (3) Projects: **\$36,000**

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** Genetic | Gene Discovery, Gene Mapping and Bioengineering Studies

**Project:** Translational genomics for drought tolerance in soybean **Amount:** \$91,973

**Investigator:** Nguyen, Henry **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The goal is to develop elite soybean lines with candidate genes from the model plant Arabidopsis that will protect and maintain the function and structure of cellular components using genetic engineering tools.

**Project:** Identification of genes for resistance to multi-soybean nematode species **Amount:** \$89,917

**Investigator:** Nguyen, Henry **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The objective is to identify and map quantitative trait loci QTL or genes conveying resistance to diseases and to determine whether the resistance to these nematode species is controlled by the same QTLs or genes.

**Project:** Novel construct design for plant gene silencing employing artificial tasiRNA **Amount:** \$83,502

**Investigator:** Zhang, Zhanyuan **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** This research is an effort to silence genes to prevent a negative response or in the absence of those genes, to have a positive effect on yield or stress.

**Project:** Sudden death syndrome and Asian rust resistant transgenic soybean **Amount:** \$112,544

**Investigator:** Shah, Dilip M. **Organization:** Donald Danforth Plant Science Center **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The overall goal of the project is to develop transgenic soybean engineered with antifungal proteins and to screen the transgenic plants for resistance to Sudden Death Syndrome SDS caused by Fusarium virguliforme and to Asian Soybean Rust ASR caused by Phakopsora pachyrhizi.

**Project:** Management of insecticide resistance in corn earworm populations **Amount:** \$69,334

**Investigator:** Jones, Moneen **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** To contribute sustainable soybean production via improved pest management, we propose the following specific research objectives: 1) Obtain baseline susceptibilities to commonly used as well as emerging insecticides in the field in southeast Missouri 2) Compare selection rates for resistance using mixture versus rotation strategies in the laboratory 3) Evaluate stability of resistance and number of generations required to return tolerant populations to susceptibility.

**Project:** Breeding new soybean cultivars with high yield and disease **Amount:** \$200,000

**Investigator:** Chen, Pengyin **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:**

**AREA:** Production | Soybean Production Research

**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development

**CATEGORY:** Genetic | Gene Discovery, Gene Mapping and Bioengineering Studies

**Project:** Development of reniform nematode resistant soybean lines from JTN-5203, PI 404166, and 02011-126-1-1-5-1-1 soybean, 33-2014 **Amount:** \$23,300

**Investigator:** Stetina, Salliana **Organization:** USDA-ARS **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Develop F2 and F2:3 populations derived from crosses between the above lines and soybean lines agronomically adapted for Mississippi, and evaluate progeny from these populations for selection of genotypes with superior reniform nematode resistance.

**Project:** Evaluation of germplasm and genetic mapping for flooding tolerance in soybean **Amount:** \$84,640

**Investigator:** Shannon, Grover **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The objective of this research is to develop new soybean varieties for Mid-South environments. The specific objectives are breeding for higher yields, disease and nematode resistance and quality traits.

**Project:** Genetic engineering to enhance oil traits in soybean **Amount:** \$175,265

**Investigator:** Nguyen, Henry **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The overall goal is to develop elite soybean lines through genetic modulation of candidate genes from plant and/or microbial sources. Efforts will be made toward increasing the oil content in soybean seeds and altering the oil quality in soybean by targeting novel genes.

**Project:** Drought tolerance research - tagging drought tolerance genes using rapid screening methods **Amount:** \$76,000

**Investigator:** Purcell, Larry **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** To use previously developed/tested remote-sensing technologies along with a rapid screening methods for water use efficiency to identify genotypes that differ in drought tolerance. This will allow us to 'tag' the genes associated with these drought tolerance traits and eventually transfer those genes into elite varieties.

**Project:** Establishment of drought-tolerant soybean plants by genetic manipulation of ERECTA signaling **Amount:** \$35,000

**Investigator:** Srivastava, Vibha **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** To modify ERECTA signaling in soybean for developing a new genetic source of drought tolerance.

**Project:** Response and net profit of genetically enhanced and conventional soybean varieties to fertilizer recommendations on low nutrient soils in rainfed and irrigated production systems, 21-2014 **Amount:** \$57,616

**Investigator:** Shankle, Mark **Organization:** Miss. State Univ., PRFBES **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Compare/validate fertility recommendations from different soil testing facilities; identify optimum K fertilizer rate for new compared to old soybean varieties grown on soils low in K; determine the economic benefits of K fertility recommendations from different testing labs.

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** Genetic | Gene Discovery, Gene Mapping and Bioengineering Studies

**Project:** Soybean germplasm enhancement using genetic diversity **Amount:** \$148,000

**Investigator:** Chen, Pengyin **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** To broaden the gene pool and improve productivity of southern soybean using exotic germplasm with genetic diversity

**Project:** Discovery of yield genes for soybean improvement **Amount:** \$112,917

**Investigator:** Nguyen, Henry **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The overall goal of this project is to detect major genomic blocks and yield signatures in soybean utilizing the genome sequencing technologies.

**Project:** Cercospora Leaf Blight Disease of Soybean-Screening Soybean Varieties for Differences in the Expression of Resistance Genes **Amount:** \$35,055

**Investigator:** Chen, Zi-Yuan **Organization:** LSU Plant Pathology & Crop Physiology **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** Pinpointing the exact source of inoculums could help us develop measures to reduce inoculum, therefore, limiting the exposure of soybean leaves to the pathogen. This project involves: • Identifying soybean lines showing consistently high levels of tolerance to *C. kikuchii* infections; • Screening four tolerant and four susceptible lines under greenhouse conditions; • Investigating the effect of water/humidity/moisture on CLB development; and • Determining the source of *Cercospora kikuchii* inoculums.

**Project:** Novel strategy for gene stacking through coordinated gene expression **Amount:** \$83,873

**Investigator:** Zhang, Zhanyuan **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** It is highly desirable to stack genes for addition or improvement of multiple traits or to enhance the studies of pathways or functions of multiple genes in plant biology research. The goal of this project is to employ a novel strategy to stack genes through coordinated transgene expressions.

**Project:** A new transgenic approach to control diseases of soybean in Arkansas **Amount:** \$58,000

**Investigator:** Bluhm, Burt **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** To develop new transgenic technologies to reduce the impact diseases on soybean production in Arkansas

**Project:** Improving soybeans for increased productivity on specific soil types -- sand, loam and clay **Amount:** \$32,000

**Investigator:** Shannon, Grover **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The objective of this study is to evaluate the selection and gene expression of lines planted on three diverse soil textures, and to determine whether any correlation can be made for selection regardless of soil type. These lines will also be selected to develop competitive Group IV and V soybean lines across soil types in the state of Missouri.

**Project:** Southern blot analysis of transgenic soybean - Glycine max plants to determine transgenic status and copy number of the DGAT1 and cysteine oleosin genes **Amount:** \$150,000

**Investigator:** Chen, Han **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The contractor will perform Southern blot analysis of primary transgenic soybean plans to determine copy number.

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** Genetic | Gene Discovery, Gene Mapping and Bioengineering Studies

**Project:** Nutritional evaluation of soybean meal generated from high oleic acid soybeans **Amount:** \$52,608

**Investigator:** Kerley, Monty **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The goal of this proposal is to provide nutritional information; amino acid profile, amino acid digestibility, energy digestibility of HO soybean meal for use by animal production facilities ;purchasers of soybean meal in valuing HO meal.

**Project:** Molecular-genetic regulation of seed oil accumulation in soybean **Amount:** \$0

**Investigator:** Nguyen, Henry **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The production of drought tolerant soybean will result in better yield and quality. For market competition, Missouri farmers need to have soybean cultivars with improved drought tolerance and yield stability. With the focus of developing soybean plants with enhanced stress tolerance and seed composition, the overall goal is to generate and characterize a number of abiotic stress-related and seed development-related transcription factor conducts.

**Project:** Genetic engineering for yield improvement in soybean **Amount:** \$50,000

**Investigator:** Nguyen, Henry **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The specific objectives of the research project are to produce transgenic soybean plants carrying different genes for enhancing carbon assimilation and lipid storage and characterize and evaluate new soybean plants for yield performance and oil accumulation.

**Project:** Identification and characterization of soybean germplasm to improve drought tolerance **Amount:** \$72,003

**Investigator:** Fritschi, Felix **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The goal of this research is to identify soybean germplasm with increased water use efficiency and altered transpiration rates. This project should deliver germplasm critical for targeted breeding for drought tolerance based on distinct biological mechanisms and show extreme phenotypes suitable for comparative analyses and identification of genes underlying the water use efficiency and transpiration rates in soybean.

**Project:** Costa Rica breeding project **Amount:** \$150,000

**Investigator:** Shannon, Grover **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** Winter nursery is an essential component of a successful soybean breeding and genetic program. In Costa Rica, three soybean crops can be grown each year and crossing can be made in off-season winter time in Missouri and year-round.

**Project:** Improving heat tolerance: Identification and characterization of soybean germplasm **Amount:** \$90,633

**Investigator:** Fritschi, Felix **Organization:** University of Missouri & USD/ARS Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The goals of this project are to 1) Identify germplasm with increased heat tolerance by exploiting genetic variability of MG III and IV genotypes 2) Develop a better understanding of the mechanisms that protect soybean yield from losses during episodes of high temperature stress and 3) Initiate incorporation of heat tolerance traits into advanced soybean germplasm and development of mapping populations.

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** Genetic | Gene Discovery, Gene Mapping and Bioengineering Studies

Production / Breeding / Genetic Subtotal of (25) Projects: **\$2,134,180**

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** OtherBreeding | Other Soybean Breeding Studies

**Project:** Phenotyping F2 populations segregating for frogeye leaf spot resistance, 32-2014 **Amount:** \$24,500  
**Investigator:** Ray, Jeff **Organization:** USDA-ARS **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Apply molecular markers to F2 DNA from previous F2 phenotype screening, phenotype a confirming F2 population segregating for C. soja resistance, collect tissue and isolate DNA from the confirming population, and advance F2 lines in a breeding program.

**Project:** Evaluation of exotic germplasm for drought tolerance **Amount:** \$0  
**Investigator:** Shannon, Grover **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** The objective of this research is to develop new soybean varieties for Mid-South environments. The specific objectives are breeding for higher yields, disease and nematode resistance and quality traits.

**Project:** Purification and production of pre-foundation seed of UA soybean lines **Amount:** \$30,000  
**Investigator:** Chen, Pengyin **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:**

**Project:** Evaluation of evaluated oleic acid germplasm for development of soybeans with high oleic acid. **Amount:** \$79,190  
**Investigator:** Shannon, Grover **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** The objective of this research is to develop new soybean varieties for Mid-South environments. The specific objectives are breeding for higher yields, disease and nematode resistance and quality traits.

**Project:** Broad-range approaches to determining salt tolerance in Arkansas soybean varieties **Amount:** \$67,000  
**Investigator:** Korth, Ken **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** Salt and drought damage to soybeans in Arkansas continue to be important problems. Our overall goal is to develop soybean breeding materials that will result in selection of existing varieties, and/or development of new varieties, with enhanced tolerance to environmental stress such as chloride toxicity.

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** OtherBreeding | Other Soybean Breeding Studies

**Project:** Advanced biotechnologies for soybean breeding and nutritional enhancement **Amount:** \$0  
**Investigator:** Nguyen, Henry **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** This project takes a holistic biotech approach to identify enabling technology traits, transformation tools and ultimately varieties that contain value-added biotech traits.

**Project:** Screening soybean germplasm and breeding soybeans for flood tolerance **Amount:** \$46,000  
**Investigator:** Chen, Pengyin **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** To improve soybean tolerance to waterlogging/flooding.

**Project:** Development of soybeans with improved functional traits for Missouri **Amount:** \$185,736  
**Investigator:** Nguyen, Henry **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** The objective of this research is to develop new soybean varieties for Mid-South environments. The specific objectives are breeding for higher yields, disease and nematode resistance and quality traits.

**Project:** North Missouri soybean breeding program **Amount:** \$367,288  
**Investigator:** Scaboo, Andrew **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** This project involves developing new soybean varieties to be used in north Missouri maturity zones with the focus on yields.

**Project:** Evaluation of the inheritance of resistance to Phomopsis seed decay (PSD) in PI 458130 populations, 31-2014 **Amount:** \$43,303  
**Investigator:** Li, Shuxian **Organization:** USDA-ARS **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Phenotype F2 population of PI 458130 based on seed plating assays for incidence of Phomopsis infection from a Phomopsis-inoculated field trial in order to identify new sources/genes for resistance to PSD that can be used for breeding high-yielding varieties with PSD resistance.

**Project:** To develop productive group IV and V soybeans resistant to nematodes and diseases **Amount:** \$238,110  
**Investigator:** Nguyen, Henry **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** Increasing the seed oil content in agronomic lines will not only make the crop more competitive globally, but will also expand its application toward biodiesel production or other industrial applications. Soybeans with increased oil content will be more competitive and would ensure for better economic gains for farmers.

**Project:** Development of Phomopsis seed decay-resistant soybean lines from new sources of resistance, 28-2014 **Amount:** \$18,000  
**Investigator:** Gillen, Anne **Organization:** USDA-ARS **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Develop high-yielding soybean lines with resistance to Phomopsis seed decay (PSD).

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** OtherBreeding | Other Soybean Breeding Studies

Production / Breeding / OtherBreeding Subtotal of (12) Projects: **\$1,099,127**

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** Quality | Soybean Seed Quality Studies

**Project:** Improving germination rate of soybean seed dried using recently-introduced in-bin drying systems agents with commercialization potential **Amount:** \$41,000

**Investigator:** Atungulu, Griffiths **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** This research is to improve the germination rate of soybean seed dried using recently-introduced in-bin drying systems which monitor not only the ambient air conditions, but also soybean moisture content and temperature throughout the entire grain bin mass during the drying process.

**Project:** Production and maintain high quality soybean seed in Arkansas and grower education **Amount:** \$75,000

**Investigator:** Rupe, John **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** To determine factors that impact seed production and soybean seed quality in Arkansas; and to educate Arkansas producers about seed quality and vigor testing.

**Project:** Determining environmental management schemes to influence the development of high seed quality in MG IV and MG V soybean, 14-2014, **Amount:** \$90,699

**Investigator:** Allen, Tom **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Create environments (controlled and natural settings) conducive to the development of seed rot, and determine their impact on seed quality; determine specific pathogenic organisms that infect soybean plant parts in the different environments, and their pathogenicity; and determine nutrition status of seed and plant tissue and its possible correlation with seed rot.

Production / Breeding / Quality Subtotal of (3) Projects: **\$206,699**

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** Variety | Soybean Variety Testing and Germplasm Screening

**AREA:** Production | Soybean Production Research

**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development

**CATEGORY:** Variety | Soybean Variety Testing and Germplasm Screening

**Project:** Evaluation of private and public soybean varieties and breeding lines for resistance to stem canker, forgeye leaf spot, purple leaf and pod stain, black root rot, and rust, 19-2014 **Amount:** \$49,093

**Investigator:** Sciumbato, Gabe

**Organization:** Miss. State Univ./DREC

**Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Determine virulence of collected stem canker isolates; evaluate entries in the Mississippi Soybean Variety Trials (MSVT) for resistance/reaction to stem canker, frogeye leaf spot, purple leaf and pod stain, and black root rot; and evaluate MSVT entries for resistance to soybean rust.

**Project:** Comprehensive disease screening of soybean varieties in Arkansas **Amount:** \$132,000

**Investigator:** Kirkpatrick, Terry

**Organization:** University of Arkansas System's Division of Agriculture

**Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** To provide independent evaluation of new soybean cultivars for resistance to major diseases and nematodes. Our specific goal for 2014 is to contribute disease resistance information in a timely manner so that the database will provide an effective method of delivering variety information to the public.

**Project:** Soybean Breeding And Variety Development **Amount:** \$26,113

**Investigator:** Buckley, Blair

**Organization:** LSU Red River Research Station

**Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** This soybean breeding program is designed to develop high-yielding, disease resistant soybean varieties and germplasm adapted to the environmental conditions of Louisiana and the Gulf Coast region. In addition to yield, the traits emphasized are Cercospora leaf blight resistance, Frogeye leaf spot resistance, Asian soybean rust resistance, drought tolerance and salt tolerance.

**Project:** Evaluation of Management Practices and Variety Selection for Improved Soybean Seed Quality **Amount:** \$22,630

**Investigator:** Lofton, Josh

**Organization:** LSU Macon Ridge Research Station

**Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** This project involves identifying factors that affect seed quality which will result in the development of methods that will enable growers to improve seed quality. The researcher will: • Develop a method to rapidly evaluate soybean seed quality that relates well to state and federal grading standards; • Assess differences among varieties in seed quality at maturity and after periods of field weathering; and • Evaluate the value of fungicides and insecticides at mid and late growth stages (R3- R6) for control of damaging seed diseases and insects and improvement of seed quality.

**Project:** Survey of seed pathogens in seed samples submitted to the variety testing program using DNA based diagnostics **Amount:** \$28,500

**Investigator:** Saylor, Ron

**Organization:** University of Arkansas System's Division of Agriculture

**Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** Use molecular diagnostic assay to quantify the frequency of pathogens associated with seed submitted to the variety testing program.

**Project:** MSU-ES on-farm soybean variety demonstration program, 57-2014, **Amount:** \$46,624

**Investigator:** Irby, Trent

**Organization:** Miss. State Univ./MCES

**Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Identify soybean varieties that are best suited to specific soil regions of Mississippi, and collect data that can be used to refine results from the MSVT.

**AREA:** Production | Soybean Production Research  
**TOPIC:** Breeding | Soybean Breeding - Germplasm and Variety Development  
**CATEGORY:** Variety | Soybean Variety Testing and Germplasm Screening

**Project:** NIR analysis of variety testing and contest beans **Amount:** \$15,000  
**Investigator:** Roberts, Craig **Organization:** University of Missouri & AgBotanica **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** This project involves NIR testing on soybean samples.

**Project:** Characteristics of maximum yield soybean fields **Amount:** \$79,000  
**Investigator:** Purcell, Larry **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** The Arkansas Soybean Promotion Board together with the Arkansas Soybean Association have established two programs to recognize farmers who produce high yields. The "Race for 100" was a one-time program to recognize a producer with documented yields of 100 bu/acre or more. The \$50,000 prize money for this program went unclaimed for several years, but in 2013, three producers who entered the contest had yields exceeding 100 bu/acre. The second program, "Grow for the Green", is also a yield contest but has eight categories. Seven of the categories are geographic divisions within the state, and one category is a state-wide contest reserved for a non-GMO variety. Within each of these eight categories, cash prizes of \$10,000, \$7500, and \$5000 are awarded for 1st, 2nd, and 3rd places. The goal of the research outlined in this proposal is to determine the soil physical and chemical properties that are a prerequisite for having exceptionally high yields (90+ bu/acre). This understanding will allow producers to assess the properties in their own fields that may limit productivity.

Production / Breeding / Variety Subtotal of (8) Projects: **\$398,960**

Production / Breeding Subtotal of (52) Projects: **\$4,069,191**

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** Economic | Economic Analyses

**Project:** Soybean enterprise budgets and production economic analysis **Amount:** \$19,000  
**Investigator:** Flanders, Archie **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** The goal of this project is to provide crop enterprise budgets for soybeans that are flexible for representing alternative production practices of Arkansas producers. Crop enterprise budgets are developed with methods that are consistent over all field crops.

**Project:** Soybean storage profitability and marketing strategies for Mississippi soybean growers, 11-2014 **Amount:** \$30,792  
**Investigator:** Williams, Brian **Organization:** Miss. State Univ. **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Determine the advantages of and estimate the costs associated with storing and drying soybeans in on-farm facilities.

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** Economic | Economic Analyses

**Project:** Developing profitable irrigated rotational cropping systems for Arkansas and mid-south **Amount:** \$9,000

**Investigator:** Kelly, Jason **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** Evaluate grain yields and resulting economic response for eight crop rotation sequences. Monitor how nematodes (Soybean Cyst, Root-knot and Reniform) and foliar diseases change over time based on crop rotation. Evaluate how soil nutrient levels, soil pH, and organic matter levels change over time due to crop rotation.

Production / Management / Economic Subtotal of (3) Projects: **\$58,792**

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** Education | Soybean Conferences and Education

**Project:** Irrigation Water Management for Southern Region Soybean Growers (Year 1 of 4) **Amount:** \$50,000

**Investigator:** Krutz, Jason **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Mid-South Soybean Board

**Goals:** One of the cornerstones of this project is the Delta States Irrigation Conference and the first of four of such annual conferences is planned for December 17-18, 2014 at the Miner Convention Center in Sikeston, MO. This project represents the most recently approved MSSB/USB project and promises to be a large, comprehensive hands-on with producer irrigation and water management educational effort. Additionally, the principle investigators plan to update the software program associated with the Phaucet program to make it much more user friendly. In addition, project investigators will work with the industry to maximize water management efforts resulting in greater water use efficiency with current developed programs such Delta Plastic's Pipe Planner program. Each mid-South investigator will initiate several in-depth on-farm water management demonstrations utilizing the latest technology each year and rotate to new demonstration cooperators each year.

**Project:** North Central Soybean Research Program **Amount:** \$30,000

**Investigator:** **Organization:** **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:**

**Project:** Technological aids for information dissemination to soybean producers **Amount:** \$13,000

**Investigator:** Saraswat, Dharmendra **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** This proposal aims to develop several smartphone based applications (short name "apps") and their associated backends (i.e. server side code) to disseminate the latest research-based information developed by the University of Arkansas Division of Agriculture to soybean producers, crop consultants and county agents.

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** Education | Soybean Conferences and Education

**Project:** Support of Delta Agriculture, Delta Council, 05-2014 **Amount:** \$15,000

**Investigator:** **Organization:** **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:**

**Project:** Farm Families of Mississippi, MFBF, 50-2014 **Amount:** \$15,000

**Investigator:** **Organization:** **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:**

**Project:** CAFNR undergraduate soybean industry research scholars **Amount:** \$16,000

**Investigator:** Parcell, Joe **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** Increase the knowledge, skills, and abilities of undergraduate students to do scientific research with a soybean focus, provide new information to students and Missourians about the benefits and opportunities within the soybean industry and increase competitiveness and profitability of Missouri and U.S. farmers through applied research.

**Project:** Soybean And Grain On-Farm Demonstration Program - 2013 **Amount:** \$50,000

**Investigator:** Levy, Ron **Organization:** LSU Dean Lee Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** The project focus is to: • Conduct soybean, corn, and grain sorghum on-farm demonstrations throughout the state; • Conduct field days and producer meetings to discuss and present demonstration results; • Work with producers on their farms with precision ag equipment; and • Collect data and compile it into a publication for distribution at meetings and on the LSU AgCenter website.

**Project:** Development of an on-line course - future of biotechnology crops **Amount:** \$9,000

**Investigator:** Robinson, Julie **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** Develop and implement more advanced online course to teach the facts about biotechnology crops and future trends, using soybean as a model crop.

**Project:** Agronomic Research and Extension To Improve Soybean Production In Louisiana **Amount:** \$25,000

**Investigator:** Levy, Ron **Organization:** LSU Dean Lee Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** The objectives of this project are to: • Investigate the effect of various agronomic, cultural, and management factors on soybean production in Louisiana; • Evaluate soybean varieties for their strengths and weaknesses, in addition to yield potential, and develop strategies to optimize their production; and • Disseminate research findings to Louisiana soybean producers, other agricultural personnel, and the scientific community through county agents, consultants, commodity meetings, popular press, online publications, professional meetings, and scientific journals.

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** Education | Soybean Conferences and Education

**Project:** Soybean research verification program **Amount:** \$90,000  
**Investigator:** Ross, Jeremy **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** To verify University of Arkansas, Division of Agriculture recommendation for soybean production, and to maintain an economic data base of production practices on a large scale field basis

**Project:** Soybean Science Challenge **Amount:** \$76,000  
**Investigator:** Ballard, Karen **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** To develop partnerships with Arkansas FFA, 4-H and Arkansas Science Air organizations and teachers to encourage and expand soy-based knowledge and applied research at the high-school level.

**Project:** Improving technology transfer for profitable and sustainable soybean production **Amount:** \$20,000  
**Investigator:** Ross, Jeremy **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** To ensure that improved production practices for soybean production in Arkansas are distributed in a timely manner.

**Project:** Application Technology Demonstration and Education Program for Arkansas Crops **Amount:** \$78,000  
**Investigator:** Barber, Tom **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** Develop and implement an effective application technology field demonstration and evaluation program in soybean production and educate the industry on new technology.

**Project:** Video support for Mississippi soybean producers, 41-2014 **Amount:** \$16,203  
**Investigator:** Spann, Leighton **Organization:** Miss. State Univ. **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Identify important soybean production topics and produce video segments that will provide producers with current, timely information needed to address issues related to those topics; video presentations of results from MSPB-funded research projects that will be posted on the MSPB website ([www.mssoy.org](http://www.mssoy.org))

**Project:** 2014 Louisiana Soybean & Grain Research & Promotion Board Report **Amount:** \$4,500  
**Investigator:** Gould, Frankie **Organization:** LSU Biological & Ag Engineering **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board  
**Goals:** The focus of this continuing project is to develop a full color tabloid that highlights Louisiana Soybean and Grain Research and Promotion Board funded projects and to distribute this report to producers, political leaders, industry and stakeholders. A secondary objective is to develop news stories based on board funded projects that are distributed through LSU AgCenter news service. The articles and press releases will also be posted on the LSU AgCenter website.

Production / Management / Education Subtotal of (15) Projects: **\$507,703**

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** OtherManagement | Other Production Management Studies

---

**Project:** Alternative winter crops for soybean double crop system **Amount:** \$30,000

**Investigator:** Green, Steven **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** To develop soybean double crop alternatives to winter wheat and identify yield limiting factors in 'white dirt' soils.

---

**Project:** Effects of the Introduction of Feed Grains into Mid-South Soybean Production Systems (Year 2 of 6) **Amount:** \$201,000

**Investigator:** Golden, Bobby **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Mid-South Soybean Board

**Goals:** This five-state long-term (six year) regional rotation study project will produce data useful to assist Mid-South soybean producers make important production and economic decisions regarding crop rotation based upon information supplied by Extension personnel, and seed companies, etc. Often the information is limited, inconsistent and not applicable to the geographic area that is being considered by the producer or the crop advisor in the Mid-South. Unfortunately, the significance of crop rotation of soybean with feed grains cultivated in southern latitudes impact upon overall soybean production is not well understood. This research will attempt to address this issue and provide Mid-South producers information about crop rotations influence on sustainable soybean production generated at their latitudes. Rationale and Objectives: 1) Determine the optimal rotation partner for soybean/feed grain based production systems in the Mid-South. 2) Evaluate the benefit of feed grain residue management on the following soybean crop. 2a). Determine if current Best Management Practices for soybean rotations in the Mid-South need to be revised. 2b). Determine the Sustainability of Non Irrigated vs. Irrigated soybean production in Mid Southern Micro Environments. 2c) Assess the economic advantage of soybean rotation with feed grains compared to monoculture soybean production in the Mid-South.

---

**Project:** Evaluation Of Soybean Cultural Practices In Southwest Louisiana **Amount:** \$64,710

**Investigator:** Harrell, Dustin **Organization:** LSU Rice **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** This project involves optimum planting dates for group V and IV soybean in Southwest Louisiana. Differences in agronomic parameters, such as plant height, lodging, maturity, test weight, and days to specific growth stages, will be determined and related to soybean yield.

---

**Project:** Investigating emerging production recommendations for sustainable soybean production in all soybean production system **Amount:** \$125,000

**Investigator:** Ross, Jeremy **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** To investigate new and untested management inputs to improve soybean production across all of the Arkansas Soybean Production System.

---

**Project:** Agronomic and economic evaluation of soybean/corn rotation with twin- row production and increased nutrient management, 07-2014 **Amount:** \$22,678

**Investigator:** Ebelhar, M. Wayne **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Determine agronomic implications of soybean/corn rotations in twin-row planting systems under standard and high soil fertility with irrigation; evaluate impact of soybean/corn rotation system on whole-farm profitability.

---

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** OtherManagement | Other Production Management Studies

**Project:** Soybean physiological maturity: documentation and developing a tool for management, 75-2014 **Amount:** \$100,718  
**Investigator:** Reddy, K. Raja **Organization:** Miss. State Univ. **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Precisely identify reproductive stages of soybean and soybean physiological maturity as a defined period from flowering in MG IV and V varieties.

**Project:** Developing cultural management practices for winter cover crops to improve soybean performance and yield in the full season soybean production system **Amount:** \$66,000  
**Investigator:** Roberts, Trent **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** To develop cultural management guidelines for winter cover crops including establishment, fertilization and residue management and to identify the specific factors that aid in soybean growth and yield.

**Project:** Effect of Planting Date, Latitude, and Environmental Factors on Choice of Maturity Group in Mid-South Soybean Production (Concluded Year 3 of 3 – Currently working on 1 YR Extension) **Amount:** \$50,000  
**Investigator:** Purcell, Larry **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Mid-South Soybean Board  
**Goals:** This six state regional project is producing data useful to predict the effects of latitude and planting date on the growth and development of a uniform set of four or five commercially available soybean varieties of four different MGs (MGs 3, 4, 5 & 6). These same varieties will be planted at four different planting dates (late-March, mid-April, mid-May and mid-June). In addition to the factors mentioned above, this project will include a component for making specific observations and recording disease and insect incidence and the associated cost of controlling these pests at each location. This regional study will also provide the opportunity for measuring the effects of different Mid-south production environments (MGs & Planting Date) on both seed composition and quality.

**Project:** Improving Management of Double Crop Soybean Production **Amount:** \$26,559  
**Investigator:** Lofton, Josh **Organization:** LSU Macon Ridge Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board  
**Goals:**

**Project:** Edamame production recommendations **Amount:** \$80,000  
**Investigator:** Ross, Jeremy **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** The overall research mission is to identify and prevent edamame yield losses attributed to insufficient mineral nutrition and evaluate agronomic practices to maximize edamame yield.

Production / Management / OtherManagement Subtotal of (10) Projects: **\$766,665**

**Project:** Remote sensing of row crops with small unmanned aerial vehicles (UAV), 46-2014 **Amount:** \$2,700  
**Investigator:** Pennington, Dean **Organization:** **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Evaluate and improve operational capabilities of the UAV/remote imagery/data analysis components used in remote sensing, and identify correlations between imagery data and components of mapped locations.

**Project:** Surface conditions affecting likelihood of temperature inversions and timing of aerial spraying, 47-2014 **Amount:** \$10,463  
**Investigator:** Thomson, Steve **Organization:** USDA-ARS **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Use weather tower data to track atmospheric stability over a cropping season and use results to predict when a temperature inversion is likely to occur.

**Project:** Delta agricultural weather project, 29-2014 **Amount:** \$23,889  
**Investigator:** Silva, Mark **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Continue data collection and dissemination of pertinent agricultural weather data and products required by Delta researchers and producers.

Production / Management / PrecisionAg Subtotal of (3) Projects: **\$37,052**

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** Soil | Soil Fertility Studies and Nutrient Recommendations

**Project:** Soybean response to N addition in high yield environments, 27-2014, **Amount:** \$22,770  
**Investigator:** Golden, Bobby **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Determine critical application time for and form of N fertilizer that will minimize detriment to N<sub>2</sub> fixation and potentially increase soybean seed yield.

**Project:** Corn and soybean crop residue management impact on soil quality, yield, and returns, 25-2014 **Amount:** \$36,714  
**Investigator:** Buehring, Normie **Organization:** Miss. State Univ./NMREC **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Determine how tillage and management of residue in a corn/soybean rotation affect soil quality, crop yields, and economic returns.

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** Soil | Soil Fertility Studies and Nutrient Recommendations

**Project:** Defining potassium nutritional requirements for soybean with indeterminate growth habit **Amount:** \$39,000

**Investigator:** Slaton, Nathan **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** Previous research has shown trifoliolate leaf K concentration at the R1-R2 growth stage to be highly correlated with yield and soil test K for soybean varieties with a determinate growth habit (Maturity Group 5, MG5), but not for indeterminate varieties (MG4). Tissue K concentrations of MG4 varieties at the R2 stage is often lower than the 1.5-1.8% threshold defining low and deficient leaf K concentrations. Our mission is to determine a specific growth stage, critical leaf K concentration, and sampling protocol for indeterminate varieties that is highly correlated with soybean yield potential. We believe the problem with the current critical leaf K concentration is that indeterminate varieties can be in the R2 growth stage for a long period and that K is allocated differently in these plants when compared to determinate varieties. Improved diagnostics for interpreting leaf K of indeterminate soybeans would enable Arkansas farmers to confidently assess and manage in-season soybean K nutrition. The specific goals in this project are to evaluate early MG IV, mid or late MG IV, and MG V soybean cultivars to improve our ability to accurately interpret leaf tissue analysis of indeterminate soybean varieties.

**Project:** Validating soil-test based fertilizer recommendations for soybean **Amount:** \$26,000

**Investigator:** Slaton, Nathan **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** Research since 2004 has focused on developing databases to redefine soil-test based P and K recommendations for soybean. Soil testing procedures were updated in 2006 and required that soil test recommendations be changed too. Changes were based on a combination of philosophy and, what was at the time, preliminary research results. Meanwhile precision agriculture and its relation to crop fertilization practices has become the focal point of crop nutrition management programs. The proposed project is the research program for Matthew Fryer (Wynne, AR) who is started working on his Master of Science Degree Program in August 2013 and was the recipient of the 2013 ASPB Soybean Fellowship Program. The project is aimed at validating the accuracy of soil-test based fertilizer recommendations in regards to soybean yield response to P and K fertilization. The goal is to evaluate recommendations with new and unique data. Currently, recommendation probability is based on the research responses that have been used to build the actual database.

**Project:** Correlation of soil test K and P indices with plant tissue concentrations and soybean yield, 22-2014 **Amount:** \$34,406

**Investigator:** Golden, Bobby **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Evaluate soybean yield response to P and K fertilization rate; correlate Lancaster and Mehlich-3 soil test P and K with plant indices (tissue concentration and seed yield).

**Project:** Soil Test Calibration And Fertilization Research For Sustainable Soybean And Corn Production In Louisiana **Amount:** \$31,058

**Investigator:** Tubana, Brenda **Organization:** LSU School Of Plant, Environmental & Soil Sciences **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** The goals of this project are to update fertilizer management and recommendations which will result in more sustainable and profitable soybean and corn production in Louisiana. The specific objectives are to: • Validate and update fertilization rates based on Mehlich-3 soil test ratings for corn and soybean production using a classical-response trial approach; • Evaluate alternative approaches (e.g., build-up and maintenance for P and K, yield goal and optical sensor-based N recommendations) for managing essential nutrients based on quantitative relationships among nutrient supply, crop nutrient demand, crop yield, fertilizer price, soil quality (soil organic matter), and interactions with other nutrients; • Evaluate corn response to P fertilization as affected by soil Zn concentration; • Evaluate the influence of lime application on available soil macro- and micro-nutrient concentrations on an acid upland soil continuously grown with corn; and • Evaluate different approaches for N recommendations using optimal N rate base upon classical N response studies, optical sensors, and a yield goal concept.

**AREA:** Production | Soybean Production Research

**TOPIC:** Management | Soybean Management Studies

**CATEGORY:** Soil | Soil Fertility Studies and Nutrient Recommendations

---

**Project:** Decadal effects of residue and water management practice alternatives on soybean yield and soil properties in a wheat-soybean double-crop production system **Amount:** \$46,000

**Investigator:** Brye, Kris **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** Enhancing the present quality and subsequent long-term sustainability of soybean-producing soils in the Mississippi River Delta region will be at the forefront of issues facing the soybean and other commodity industries in the near future as tighter environmental rules and regulations are enacted in an effort to improve water and air quality and further foster soil and water conservation. The adoption of conservation practices is a valuable investment in the future, ensuring that subsequent generations have productive lands to farm to feed ever-growing populations. Failure to promote, through research and education, the voluntary adoption of conservation practices could cause producers to be forced into changing their operations in the future for reasons they do not know or care about. Foreseeing these shifts will help ensure that Arkansas' and our nation's soybean producers are productive and competitive for many decades to come. Therefore, the goal of this proposed research project is to document long-term trends and improve the long-term sustainability of soybean production and soil resources in the Mississippi River Delta region of eastern Arkansas.

---

**Project:** Fertilization of soybean **Amount:** \$70,000

**Investigator:** Slaton, Nathan **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** The overall research mission is to identify potential yield limitations via soil and plant analysis and prevent soybean yield losses attributed to insufficient (or toxic) mineral nutrition. The specific goals addressed with this project are to 1) evaluate the benefit of foliar-applied solutions that claim to enhance soybean yield, 2) continue to evaluate phosphorus (P) and potassium (K) fertilization strategies, soil test methods and plant analysis that aid in identifying deficient soils and/or maximize yield potential and economic returns, and 3) develop a leaf tissue Cl concentration that can be used to diagnose Cl toxicity.

---

**Project:** In-Field Evaluation Of Soil Fertility For Soybean And Corn **Amount:** \$13,903

**Investigator:** Haggard, Beatrix **Organization:** LSU Northeast Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** Field studies will be conducted to determine optimum fertility levels for soybean and corn production in Louisiana. Plant tissue and soil samples will be monitored to assess fertility effects.

---

**Project:** Optimization of Potassium Fertilization for Corn and Soybean Production **Amount:** \$15,668

**Investigator:** Haggard, Beatrix **Organization:** LSU Northeast Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** Farmers in Louisiana have seen an increase in the frequency and severity of potassium deficiencies, especially in regions where potassium nutrition was not a problem. One potential explanation for this is the continuing increases in yields of both soybean and corn. This study will investigate late season potassium deficiencies and the beneficial use of foliar potassium products in preventing potassium deficiencies in Louisiana.

---

**Project:** Evaluation of soybean plant response to tillage system, 02-2014 **Amount:** \$12,000

**Investigator:** Flint, Ernie **Organization:** MCES **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Determine economic feasibility of adopting a no-till system for soybean production, and evaluate soybean performance and soil parameters when a no-till system is converted to a till system of production.

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** Soil | Soil Fertility Studies and Nutrient Recommendations

**Project:** Assessment of soybean varieties in Arkansas for sensitivity to chloride injury **Amount:** \$32,000  
**Investigator:** Green, Steven **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** To perform chloride reaction screenings in soybean using the hydroponic and laboratory testing method developed by the late Dr. Darrel Widick.

Production / Management / Soil Subtotal of (12) Projects: **\$379,519**

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** Sustainability | Sustainable Soybean Production Practices

**Project:** Missouri Green Fields Initiative **Amount:** \$0  
**Investigator:** Wiebold, Bill **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** The overall objective of this project is to develop a web site that allows Missouri farmers to compare their current soybean production practices with a scientifically-based assessment of sustainable practices. The calculated "greenness index" will be a user-friendly method for that comparison.

**Project:** The Arkansas Discovery Farm program **Amount:** \$17,000  
**Investigator:** Daniels, Mike **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** The Arkansas Discovery Farm program strives to document sustainable and viable row crop farming systems on real, working farms that promote agricultural profitability and natural resource protection.

**Project:** Timing Of Irrigation Initiation And Termination On Soybean Yield In Northeast Louisiana **Amount:** \$18,177

**Investigator:** Lofton, Josh **Organization:** LSU Macon Ridge Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** The knowledge of proper irrigation scheduling is essential for achieving optimum soybean yields. One key aspect of irrigation scheduling is determining when to initiate and terminate irrigation practices. Therefore, the results of this study will be to aid Louisiana producers determine the optimum initiation and termination of irrigation for Louisiana soybean production.

**Project:** Utility of subsurface drip irrigation for soybean production **Amount:** \$49,088

**Investigator:** Nelson, Kelly **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** This project involves evaluating the effect of subsurface drip irrigation on soybean response in rotation with corn, and the effect of subsurface drip irrigation spacing on soils with slopes greater than 3% on crop response in a clay pan soil.

**Project:** Improving yield and yield stability for irrigated soybeans **Amount:** \$151,000

**Investigator:** Henry, Chris **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** This project is a continuation of an ongoing effort to improve yield and yield stability for irrigated soybeans in Arkansas. Coordination of past and present projects are needed for a better understanding of the soil-plant-water relationship necessary for continued improvements in yield and yield stability of irrigated soybean

**Project:** Economics of multiple water-saving technologies across the Arkansas delta region **Amount:** \$47,000

**Investigator:** Kovacs, Kent **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** Identify best irrigation management practices that can help soybean farmers in Arkansas adapt to increasing water shortage, rainfall variability and potential policy changes.

**Project:** Determine irrigation rate and timing, and water availability for optimum yield, water use efficiency, and profitability of soybean in Mississippi Blackland Prairie region, 62-2014 **Amount:** \$25,000

**Investigator:** Feng, Gary **Organization:** USDA-ARS **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Determine triggering criteria to maximize yield and water use efficiency (WUE) when using on-farm stored water for irrigation, and compare economics of using surface vs. groundwater.

**Project:** Sustaining water resources in mid-south soybean **Amount:** \$40,000

**Investigator:** Daniels, Mike **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** The Arkansas Discovery Farm program will be utilized to document the impact of water management and irrigation on water quality and quantity as it relates to soybean production in Arkansas

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** Water | Soil Moisture, Irrigation and Water Management Studies

**Project:** Row crop irrigation science extension and research (RISER) program, 55-2014 **Amount:** \$137,256

**Investigator:** Krutz, Jason **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Develop and validate irrigation best management practices, and utilize onsite farm application and training programs to facilitate wide-spread adoption of these best irrigation management practices and water conservation tools for soybean producers in Mississippi

**Project:** Plant, soil, and weather based cues for irrigation timing in soybean production **Amount:** \$25,000

**Investigator:** Reba, Michelle **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** Compare the yield and pest response to irrigation timing in a clay and sand dominated soils

**Project:** Web application for flexible pipe calculation system, 76-2014 **Amount:** \$26,487

**Investigator:** Loper, James **Organization:** Miss. State Univ. **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Create an online software tool that can be used to optimize designs for flexible pipe irrigation systems.

**Project:** Developing scientific irrigation scheduling methods for Mississippi soybean production systems, 52-2014 **Amount:** \$34,977

**Investigator:** Krutz, Jason **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Evaluate existing and new irrigation scheduling tools for improving soybean yield, seed quality, and irrigation water use efficiency under Midsouth growing conditions.

**Project:** Impact of irrigation initiation timing on plant development and yield of indeterminate and determinate soybean varieites, 56-2014 **Amount:** \$48,890

**Investigator:** Irby, Trent **Organization:** Miss. State Univ./MCES **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Provide economic assessment of various irrigation initiation timings, and measure differences in plant development and yield from the different timings.

**Project:** Yield and economic responses of soybean to irrigation initiation on clay soil in Mississippi, 40-2014 **Amount:** \$25,322

**Investigator:** Pringle, H.C. Lyle **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Determine the relationship of irrigation initiation timing to yield and economic return from soybean grown on Mississippi Delta soils.

**Project:** Developing profitable deficit irrigation guidelines for Mississippi soybean production systems, 53-2014 **Amount:** \$98,497

**Investigator:** Krutz, Jason **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Increase soybean yield potential and profitability by developing production systems that require up to 25% less irrigation water through 1) determining optimum physiological period for initiating irrigation, 2) determining critical physiological period for terminating irrigation, and 3) determining growth stage(s) when deficit irrigation adversely affects yield and profitability.

**AREA:** Production | Soybean Production Research  
**TOPIC:** Management | Soybean Management Studies  
**CATEGORY:** Water | Soil Moisture, Irrigation and Water Management Studies

**Project:** Developing strategies for improving furrow irrigation efficiency, 54-2014, **Amount:** \$76,100  
**Investigator:** Krutz, Jason **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Determine utility of surge irrigation and surge irrigation + PHAUCET for increasing surface irrigation efficiency while simultaneously maintaining or improving irrigated soybean yields.

**Project:** Irrigation pumping plant efficiency **Amount:** \$45,000  
**Investigator:** Henry, Chris **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** The goal of this project is to study irrigation pumping plant cost and efficiency and to develop Extension resources for producers for making decisions about pumping plant operation and changes.

**Project:** Costs and benefits of on-farm water storage (OFWS) systems, 10-2014, **Amount:** \$67,896  
**Investigator:** Tagert, Mary Love **Organization:** Miss. State Univ. **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Quantify and determine the cost-benefit of using OFWS for irrigation water supply, and quantify the nutrient load in recycled water that is used for irrigation.

Production / Management / Water Subtotal of (16) Projects: **\$915,690**

**Project:** Evaluation Of Cercospora Leaf Blight And Purple Seed Stain In Louisiana **Amount:** \$30,893  
**Investigator:** Price, Trey **Organization:** LSU Macon Ridge Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board  
**Goals:** Cultivation methods and the effect on CLB and PSS need to be understood to prevent deterioration of seed quality. This project involves: • Further defining C. kikuchii disease development at all stages of soybean development; • Evaluating the effect of seed treatment on C. kikuchii; • Exploring possible alternative hosts and overwintering sites of C. kikuchii; • Studying possible interactions between C. kikuchii and soybean insect pests; and • Determining the effects of cultivation techniques on C. kikuchii.

**Project:** Using Molecular Biology To Control Soybean Diseases: Cercospora Leaf Blight And Rust **Amount:** \$55,928  
**Investigator:** Chen, Zi-Yuan **Organization:** LSU Plant Pathology & Crop Physiology **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board  
**Goals:** Discovering the impact of cercosporin in soybean may enable specialists to develop more effective control options for CLB. The research study will explore the importance of cercosporin in soybeans. The specific objectives of the project are: • Determining the importance of two light induced genes in cercosporin toxin production; • Developing mutants lacking cercosporin toxin production to determine the importance of cercosporin toxin in causing leaf blight disease in soybean; and • Exploring a new approach to control Cercospora leaf blight and rust diseases in soybean.

**Project:** Development of an effective program to manage strobilurin-resistant frogeye leaf spot in Arkansas **Amount:** \$51,000  
**Investigator:** Faske, Travis **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** Develop practical management tactics to control strobilurin-resistant frogeye leaf spot and characterize traits in these fungicide-resistant pathogens that may increase disease incidence. Determine the potential of DMI- resistant development and develop guidelines to reduce the impact of fungicide-resistant diseases.

---

**Project:** Biology and Control Of Major Diseases of Soybeans **Amount:** \$94,613

**Investigator:** Schneider, Raymond **Organization:** LSU Plant Pathology & Crop Physiology **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** Understanding the biology and genetics of pathogens will equip specialists to develop methods of combating diseases as they change. This project: • Develops and verifies commercially acceptable fungicide application protocols for Cercospora leaf blight. Other diseases also will be evaluated in these tests; • Continues assessments of plant nutrition on development of CLB, rust and other diseases; • Test foliar applications of minor elements, such as zinc, copper and iron, for their effects on disease development; • Implements a fungicide resistance monitoring program for rust and CLB pathogens; • Screens selected germplasm and breeding lines for resistance to rust; and • Finalizes and makes available to the industry our yield loss calculator.

---

**Project:** Soybean Disease (including Rust) Sentinel Plot Scouting Program **Amount:** \$27,500

**Investigator:** Hollier, Clayton **Organization:** LSU Plant Pathology & Crop Physiology **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** By monitoring for diseases, we can potentially reduce losses and increase profits for growers. The research involved in this project will: • Establish twenty soybean sentinel plots across the state to weekly monitor SBR and other diseases; • Publicize the results of the weekly soybean observations as they are available; • Advise soybean producers on applications of fungicides based on weekly results and yearly accumulation of disease information; and • Use mobile scouting (scouting of commercial fields) as sentinel plots mature.

---

**Project:** Measuring Yield Losses Due To Diseases Of Soybeans **Amount:** \$24,000

**Investigator:** Hollier, Clayton **Organization:** LSU Plant Pathology & Crop Physiology **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** This project will emphasize the area of disease forecasting and yield loss assessments. The researcher will: • Determine the effectiveness of selected management strategies (reduced rates of fungicides, tank mixes and split applications); • Develop decision aids for fungicide use; • Determine yield losses due to wheat diseases; and • Evaluate all soybean variety plots across the state for disease loss.

---

**Project:** Foliar disease management in full and double crop soybean production systems in Arkansas **Amount:** \$36,000

**Investigator:** Spurlock, Terry **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** Improving soybean profitability by determining appropriate timing and fungicide combination to control foliar diseases of soybean. This will have direct value to the producer by improving their ability manage foliar diseases efficiently, economically, and effectively.

---

**Project:** Development of a seedling inoculation technique to evaluate soybean for resistance to Phomopsis seed decay, 34-2014 **Amount:** \$26,679

**Investigator:** Li, Shuxian **Organization:** USDA-ARS **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Develop a seedling inoculation technique to evaluate soybean for resistance to Phomopsis seed decay (PSD), analyze the correlation between seed assays from field trials and the seedling assays, and use the technique to test soybean varieties for PSD resistance.

**AREA:** Pests | Soybean Pests: Diseases, Nematodes, Insects, Weeds & Stress  
**TOPIC:** Disease | Soybean Disease Research  
**CATEGORY:** OtherDisease | Other Soybean Disease Studies

**Project:** Understanding Neocosmospora, Thielaviopsis and Fusarium Virguliforme in early season production systems **Amount:** \$59,000  
**Investigator:** Spurlock, Terry **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** Improving soybean profitability. Direct value since the findings from this project could have a noteworthy positive economic effect on production cost by increasing yields and lowering production costs.

**Project:** Surveying Louisiana Soybeans for Soybean Vein Necrosis and Soybean Mottle **Amount:** \$20,000

**Investigator:** Valverde, Rodrigo **Organization:** LSU Plant Pathology & Crop Physiology **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** This investigation will obtain information on the resistance or susceptibility of soybean lines to infections by three soybean viruses that occur in Louisiana. The goal of this soybean breeding effort is to make available to Louisiana soybean growers soybean lines that have been tested for viruses. The specific objectives are to: • Inoculate selected soybean breeding lines with Soybean mosaic, Bean pod mottle and Tobacco ringspot viruses; • Evaluate the reaction of breeding-lines to each individual virus; and • Analyze the results and provide data to the soybean breeders that are developing new varieties.

**Project:** Soybean vein necrosis virus (SVNV) in Mississippi, 66-2014 **Amount:** \$49,391

**Investigator:** Sabanadzovic, Sead **Organization:** Miss. State Univ. **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Estimate incidence of SVNV in Mississippi soybeans, annotate symptoms in infected plants, ID alternative hosts, and study genetic diversity of the MS SVNV population.

**Project:** Dissecting the epidemiology and resistance to soybean vein necrosis virus **Amount:** \$80,000

**Investigator:** Tzanetakis, I.E. **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** Minimize impact of Soybean vein necrosis and develop sustainable approaches to control the disease.

**AREA:** Pests | Soybean Pests: Diseases, Nematodes, Insects, Weeds & Stress

**Project:** Bee project: assessing the impact of Neonicotinoid seed treatments on pollinators **Amount:** \$25,000

**Investigator:** Lorenz, Gus **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** To determine whether neonicotinoid insecticides, at the rates being used in typical southern agricultural systems, are impacting pollinator health. If this is the case, appropriate mitigating action will be needed but tempered by the needs of agricultural production.

**Project:** Educating growers and consultants on insect monitoring and control **Amount:** \$5,000

**Investigator:** Lorenz, Gus **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** To educate growers, consultants, and other ag industry on the proper techniques for monitoring and management of soybean insect pest populations and to help provide them with the tools they need to make effective and economical decisions.

**Project:** Fire ant control in soybean **Amount:** \$11,000

**Investigator:** Lorenz, Gus **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** Determine impact of fire ants in the soybean agro-ecosystem and to include impact on pest and beneficial insects, harvest and subsequent yield

**Project:** Characterization of the resistance potential for the diamide insecticides Belt and Prevathon, 37-2014 **Amount:** \$37,316

**Investigator:** Gore, Jeffrey **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Quantify the variation in response of bollworm; determine influence of selection pressure on resistance development in bollworm, soybean looper, and beet armyworm; correlate field control with this insecticide class against resistant and susceptible insect populations; and determine heritability and mechanisms of resistance in these insects.

**AREA:** Pests | Soybean Pests: Diseases, Nematodes, Insects, Weeds & Stress

**TOPIC:** Insect | Soybean Insect Studies

**CATEGORY:** OtherInsect | Other Insect Studies

**Project:** Impact of planting date and maturity group on management strategies for insect pests in Mississippi, 58-2014 **Amount:** \$58,647

**Investigator:** Catchot, Angus **Organization:** Miss. State Univ./MCES **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** In ESPS and conventional soybean plantings of MG IV and V varieties, identify seasonal periods that are most susceptible to damage from insect pests, evaluate effects of season-long caterpillar control, and document potential risk from caterpillar pests by using disruptive pyrethroid sprays.

**Project:** Soybean Looper Population Growth Rates on Herbicide Resistant Weeds **Amount:** \$16,480

**Investigator:** Davis, Jeff **Organization:** LSU Entomology **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:**

**Project:** Three-cornered alfalfa hopper (TCAH) management in soybeans, 17-2014, **Amount:** \$50,820

**Investigator:** Musser, Fred **Organization:** Miss. State Univ. **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Refine current TCAH thresholds in soybeans; estimate sweep net sampling efficiency for TCAH in soybeans; and evaluate efficacy and residual activity of insecticide seed treatments and foliar insecticides against TCAH.

**Project:** Integrated Mgt of Changing Soybean Insect Pest Complexes **Amount:** \$57,350

**Investigator:** Davis, Jeff **Organization:** LSU Entomology **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** The potential for making over applications of insecticide could be lessened or eliminated if response differences to stink bug among soybean varieties are better understood. This project will: • Quantify in-field stink bug immigration and population increase on variety DP 4888 RR (moderately stink bug resistant) and variety P4906 RR (stink bug susceptible) receiving five different treatments; and • Determine treatment effects on seed yield and seed quality.

**Project:** Lepidopteran insect pest management in soybeans, 01-2014 **Amount:** \$72,163

**Investigator:** Cook, Don **Organization:** Miss. State Univ. **Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Refine/validate current corn earworm thresholds in soybeans; determine residual efficacy of new insecticides for control of soybean looper; maintain and continue testing of labeled insecticides to manage soybean insects.

**Project:** Development of Methods Assessing the Effects of Drought and Salt Stress on Soybean Insect Management **Amount:** \$3,500

**Investigator:** Beuzelin, Julien **Organization:** LSU Dean Lee Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:**

**AREA:** Pests | Soybean Pests: Diseases, Nematodes, Insects, Weeds & Stress  
**TOPIC:** Insect | Soybean Insect Studies  
**CATEGORY:** OtherInsect | Other Insect Studies

**Project:** Developing a new threshold for corn earworm, *Helicoverpa zea* **Amount:** \$26,000  
**Investigator:** Lorenz, Gus **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** Develop a dynamic threshold for corn earworm (CEW) that takes into account the value of the crop, the cost of control and most importantly maintains profitability for the Double Crop Soybean Production System.

**Project:** Optimizing Chemical Control Strategies For Louisiana Soybean Pests **Amount:** \$26,506  
**Investigator:** Kerns, David **Organization:** LSU Macon Ridge Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board  
**Goals:** This research defines the thresholds of seed injury at different soybean growth stages and provides opportunities to further refine IPM strategies. The project's specific objectives are to: • Evaluate soybean IST products/rates against seed and seedling pests and measure yield impacts; • Refine action thresholds and define when to terminate soybean IPM based upon seed yield/quality; • Evaluate chemical control technologies against pests, with an emphasis on stink bugs/ caterpillars; • Determine three-cornered alfalfa hopper injury on soybeans during vegetative/reproductive stages; and • Initiate an experiment to determine the impact of spider mites on soybean yield.

**Project:** Re-evaluation Of Threecornered Alfalfa Hopper Pest Status In Louisiana Soybeans **Amount:** \$14,950  
**Investigator:** Beuzelin, Julien **Organization:** LSU Dean Lee Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board  
**Goals:** This study will document the occurrence of three-cornered alfalfa hopper in Louisiana soybean fields and currently implemented management tactics. Fields studies will be conducted to reevaluate potential yield losses associated with this pest of soybeans.

**Project:** Bee project: Assessing impact of neonicotinoid (NEO) seed treatments on pollinators, 59-2014 **Amount:** \$54,948  
**Investigator:** Catchot, Angus **Organization:** Miss. State Univ./MCES **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Quantify number of honey bees visiting agronomic crops in MS, titrate NEO insecticides in feeding stations in bee hives and monitor bee health, and determine NEO levels in soybeans from emergence through maturity after seed treatment with NEO insecticides.

**Project:** Using microgenomics to identify new sources of soybean cyst nematode resistance in soybean **Amount:** \$81,649  
**Investigator:** Mitchum, Melissa **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** This project will study a new biotech approach to soybean nematode resistance.

**Project:** Germplasm identification and selection for soybean cyst nematode **Amount:** \$82,478  
**Investigator:** Nguyen, Henry **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** This research will support the discovery and evaluation of new sources of soybean resistance to soybean cyst nematode. This will lead to the development of improved soybean varieties.

Pests / Nematode / Cyst Subtotal of (2) Projects: **\$164,127**

**AREA:** Pests | Soybean Pests: Diseases, Nematodes, Insects, Weeds & Stress  
**TOPIC:** Nematode | Soybean Nematode Research  
**CATEGORY:** OtherNematode | Other Nematode Studies

**Project:** Integration of brassica winter cover crops into soybean production systems for the suppression of nematodes and other soilborne diseases **Amount:** \$25,000  
**Investigator:** Rothrock, Craig **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** To improve the management of nematodes and soilborne diseases of soybean by integration of brassica winter cover crops in the soybean production system.

**Project:** A soybean nematode survey and education program for Arkansas **Amount:** \$65,000  
**Investigator:** Kirkpatrick, Terry **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** To increase the awareness among soybean growers of the presence and severity of nematodes on their farms, with particular emphasis on fields with histories of long cotton monoculture or corn production.

**Project:** Use of a plant elicitor peptide for broad-spectrum nematode resistance **Amount:** \$36,000  
**Investigator:** Groggins, Fional **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** To enhance resistance to root-knot nematodes, soybean cyst nematodes, and reniform nematodes in soybean by increasing expression of a plant elicitor peptide that can activate broad-spectrum defenses against nematodes.

**AREA:** Pests | Soybean Pests: Diseases, Nematodes, Insects, Weeds & Stress  
**TOPIC:** Nematode | Soybean Nematode Research  
**CATEGORY:** OtherNematode | Other Nematode Studies

**Project:** Nematode management investigations in Mississippi soybean production systems, 12-2014 **Amount:** \$38,808  
**Investigator:** Allen, Tom **Organization:** Miss. State Univ./DREC **Promotion Board:** Mississippi Soybean Promotion Board  
**Goals:** Determine impact of 1) Telone II and seed-applied nematicides on soybean production in nematode-infested fields, 2) variety selection for root knot nematode-infested fields, and 3) winter cover crops for managing sites with high nematode pressure.

**Project:** Integrated management of soybean nematodes in Arkansas **Amount:** \$47,000  
**Investigator:** Kirkpatrick, Terry **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board  
**Goals:** Our goals are as follows: 1) Determine the significance and potential risk of plant-parasitic nematodes in Arkansas soybeans. 2) To evaluate currently-existing methods for controlling nematodes in soybean, and to test newly emerging control technology and resistant cultivars. 3) To develop sustainable, economically feasible nematode management strategies for Arkansas producers.

**Investigator:** Edwards, Ryan

**Organization:** Miss. State Univ.

**Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Determine effectiveness of cover crops for controlling underlying weed populations in conjunction with PRE residual herbicide applications in soybeans.

**Project:** Addressing critical weed control issues in soybean, 20-2014 **Amount:** \$121,608

**Investigator:** Irby, Trent

**Organization:** Miss. State Univ./MCES

**Promotion Board:** Mississippi Soybean Promotion Board

**Goals:** Develop strategies for management of herbicide-resistant (HR) weeds; determine utility of dicamba-, 2,4-D-, and HPPD-tolerant soybeans for positioning into weed management programs; evaluate weed control strategies such as winter cover crops for managing weeds in soybeans.

**Project:** Support of MU weed science Extension efforts directed towards the management of glyphosate-resistant weeds **Amount:** \$10,000

**Investigator:** Bradley, Kevin

**Organization:** University of Missouri

**Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The objective is to provide growers, crop consultants, MU extension field faculty and other representatives throughout the agricultural industry with timely and accurate research-based information, recommendations, and education pertaining to the best management practices for the prevention and control of herbicide-resistant weeds in Missouri soybean production systems.

**Project:** A team approach to weed management in soybean **Amount:** \$229,000

**Investigator:** Scott, Bob

**Organization:** University of Arkansas System's Division of Agriculture

**Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** The overall goal of this project is to evaluate new and emerging technologies, rapidly identify herbicide-resistant weeds, determine their distribution, determine their mechanisms of resistance, and develop viable solutions for managing herbicide-resistant weeds, reducing the soil weed seed bank and controlling other problematic weeds for Arkansas full season soybean producers. In addition efforts will be made to utilize full season production methods to aid in reducing the overall soil weed seed bank. A major goal will be providing a rapid information exchange between the grower, extension personnel, and researchers.

**Project:** Soybean Weed Management Systems In Louisiana **Amount:** \$55,000

**Investigator:** Stephenson, Daniel **Organization:** LSU Dean Lee Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** Determination of weed management systems that utilize herbicide-tolerant crops along with various chemical and cultural weed control methods provides Louisiana soybean producers with effective weed management strategies. This project: • Identifies and investigates weed management with new and/or currently registered herbicide-tolerant soybeans in Louisiana; • Elucidates the potential of currently registered and/or new herbicide products for weed management in Louisiana soybeans; • Investigates and confirms herbicide resistant weeds in Louisiana and identifies methods to control and/or mitigate this issue; and • Disseminates information on weed management systems to Louisiana soybean producers and the scientific community through county agents, consultants, commodity meetings, popular press, online publications, professional meetings, and scientific journals.

**Project:** Soybean Weed Control Research In Northeast Louisiana **Amount:** \$36,800

**Investigator:** Miller, Donnie **Organization:** LSU Northeast Research Station **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** Assessing the impact of herbicide co-applications on weed control efficacy could provide more economical control options. The researchers involved in this project will continue to evaluate: • Experimental compounds for weed efficacy and crop tolerance; • Burndown programs, emphasizing control of henbit with spring and fall programs; • Dicamba co-application effects with additional pesticides on weed control; • Soil residual effects from dicamba drift on non-resistant soybean; and • Tillage and chemical removal on post harvest weed germination. The research will also conduct cooperative work verifying resistant weed species and identification of control measures.

**Project:** Weed Management And Biology Research In Soybeans **Amount:** \$40,000

**Investigator:** Griffin, James **Organization:** LSU School Of Plant, Environmental & Soil Sciences **Promotion Board:** Louisiana Soybean & Grain Research & Promotion Board

**Goals:** Understanding the interaction between pest management practices and use of harvest aids is critical to maximizing soybean yield potential and economic return. This project involves the following objectives: • Evaluating crop safety, weed control, and fit of experimental herbicides in Louisiana production systems and to develop cost effective weed management programs; • Evaluating future transgenic technologies for weed control and non-target crop response; • Monitor weed population shifts and weed resistance associated with herbicide-resistant crops; and • Evaluate possible interactions that may occur with use of insecticides, fungicides, and harvest aids.

**Project:** Using soybean meal protected from rumen degradation to improve health of receiving calves and feed efficiency of stocker and feedlot calves **Amount:** \$85,700

**Investigator:** Kerley, Monty **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The goal of this research is to demonstrate the economic value of RUP from soybean meal for receiving, stocker and feedlot cattle.

**Project:** Assessing nutritional value of soybean meal: identifying nutritional traits that would improve market position of soybeans **Amount:** \$126,915

**Investigator:** Kerley, Monty **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The goal of this research is to develop a model for evaluating nutritionally important attributes of soybean meal and rapid NIR prediction of these attributes. The objectives of this proposed research is to identify soybean cultivars that have higher energy and amino acid digestibility, to develop a model sensitive enough to determine level of improvement in soybeans selected for nutritional attributes, and to develop NIR calibrations for assessing nutritional value of soybeans meal.

**Project:** Improving rumen stability of soybean meal protein **Amount:** \$0

**Investigator:** Kerley, Monty **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council

**Goals:** The goal of this research is to develop a rumen-stable soybean meal that can be marketed to ruminant markets.

Utilization / Meal / Ruminant Subtotal of (3) Projects: **\$212,615**

**AREA:** Utilization | Soybean Utilization  
**TOPIC:** Meal | Soybean Meal Usage Research  
**CATEGORY:** Swine | Soybean Meal - Swine Studies

**AREA:** Utilization | Soybean Utilization  
**TOPIC:** Meal | Soybean Meal Usage Research  
**CATEGORY:** Swine | Soybean Meal - Swine Studies

**Project:** Is the allergen affect on pigs a myth? **Amount:** \$0  
**Investigator:** Kerley, Monty **Organization:** University of Missouri **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** The goal is to determine the impact allergens in soybeans have on growth of livestock sensitive to the allergenic proteins.

Utilization / Meal / Swine Subtotal of (1) Project: **\$0**

Utilization / Meal Subtotal of (8) Projects: **\$327,160**

**AREA:** Utilization | Soybean Utilization  
**TOPIC:** Oil | Soybean Oil Usage Research  
**CATEGORY:** Biofuel | Soybean Oil Studies- Biofuel and Industrial Use

**Project:** Bioheat Technical Steering Committee - BTSC data needed to ballot legacy safe blend level **Amount:** \$25,000  
**Investigator:** Whitehead, Doug **Organization:** National Biodiesel Board **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** Goals are to develop and provide the additional data necessary to re-ballot the allowance for up to 20% biodiesel in heating oil within the ASTM specifications.

**Project:** ASE certified diesel technician training and education **Amount:** \$25,000  
**Investigator:** Whitehead, Doug **Organization:** National Biodiesel Board **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** The core of this training is to equip today's technicians with credible information about this advanced biofuel so biodiesel use is encouraged, not discouraged, as has been the case with other alternative fuels.

**Project:** Bioheat Technical Steering Committee **Amount:** \$25,000  
**Investigator:** Whitehead, Doug **Organization:** National Biodiesel Board **Promotion Board:** Missouri Soybean Merchandizing Council  
**Goals:** This project will provide FY14 funding toward remaining technical efforts and projects identified by the BTSC which includes storage stability, low temperature impacts, and other efforts needed in order to develop and secure their approval for the legacy safe levels of biodiesel--anticipated to be B20--with No. 1 and No. 2 grades in the ASTM D396 heating oil standard.

Utilization / Oil / Biofuel Subtotal of (3) Projects: **\$75,000**

**AREA:** Utilization | Soybean Utilization  
**TOPIC:** Oil | Soybean Oil Usage Research  
**CATEGORY:** EdibleOil | Soybean Oil for Food Studies

**Project:** Industrial CLA-rich soy oil production and marketing through a Division of Agriculture-Riceland Foods research collaboration **Amount:** \$50,000

**Investigator:** Proctor, Andy **Organization:** University of Arkansas System's Division of Agriculture **Promotion Board:** Arkansas Soybean Promotion Board

**Goals:** The goal is to commercialize conjugated linoleic acid (CLA)-rich oil production technology by developing industrial production and food product development, through university-industry research collaboration.

Utilization / Oil / EdibleOil Subtotal of (1) Project: **\$50,000**

Utilization / Oil Subtotal of (4) Projects: **\$125,000**

Utilization Subtotal of (14) Projects: **\$482,460**

**Grand Total of (185) Projects: \$9,908,869**
